

Product: **Xinet**
Version: **18.0.2**
Release Date: **July 7, 2015**

XINET

Optimize Media Production Environments for Creatives, Agencies, and Studios.

Xinet revolutionized the creative development and production process and provides an optimized media production environment for local, creative agencies, design companies and in-house creative design teams engaged in digital or print production.

Xinet enables physically distributed team members and other collaborators in the creative development and production process to work with the latest version of their files, quickly locating, modifying and finalizing creative work without disruption or complicated processes.

Tip: Copies of this Release Notes document are also stored online alongside each software release in our “Downloads” volume. If you have any questions about these releases or about the material that is included in the manuals, please contact Xinet Technical Support at xinet@northplains.com.

WHAT'S NEW

Software Updates:

In this release we have addressed a number of known issues. In addition, we have implemented the following new features for this release.

Added Support for Adobe CC 2015

New in this release, we have implemented support for Adobe InDesign CC 2015 for all Xinet Client Plug-ins.

Added Comments to Assets are now Searchable

Portal users can now search for comments added to assets.

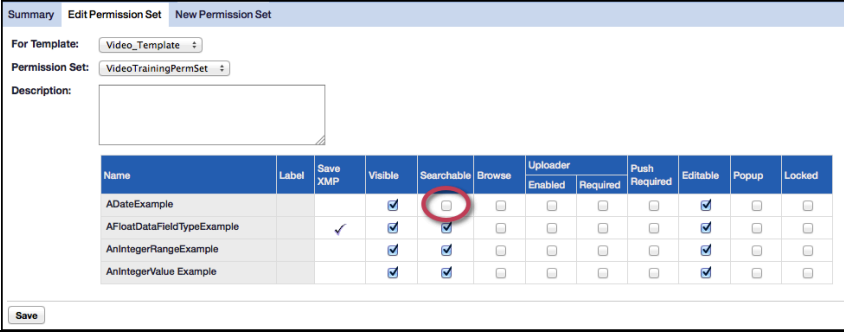

Documentation Updates:

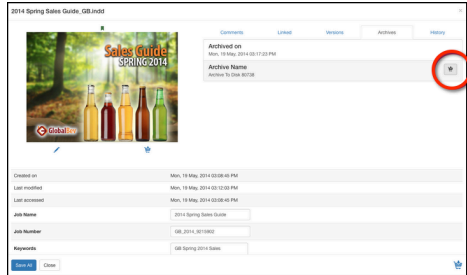

The **Xinet Release Notes** changes every release because they describe the resolved, limitations, and known issues within the Xinet release. This update replaces the previous version of this document.

The **Xinet Portal Administration Guide** is updated to include a procedure on how to create your own Marquee theme.

RESOLVED ISSUES

The full list of specific additions and bug fixes that are included in this release are detailed below.

Ticket	Component	Issue
XIN-5105	PortalDI	The <i>xmp:MetadataDate</i> data field, used to track the date when the XMP data for a file has been changed, is now updating when changes are made in Portal.
XIN-5089	Xinet DB, Xinet Core	Solr Search: When an Administrator sets which Data Field are searchable in the Database > Permission Sets for a template, assets are no longer displaying in search results if tagged as not searchable. 
XIN-5088	Portal Marquee UI	Marquee Template: Corrected the display of tooltips for custom buttons added to Portal's Icons and Buttons view.

XIN-5085	Portal Marquee UI	<p>Marquee Template: Portal users can now restore OnFile archived files in the Marquee theme.</p> 
XIN-5058	Xinet Server	Localization: In the Xinet Server, messages, when deleting a Volume, are now displayed correctly for Japanese localization.
XIN-5055	Portal Marquee UI	Marquee Template: A red flag is now displayed correctly for offline files.
XIN-5053	Xinet Portal	Browse and search views now display properly for folders and results including and offline archived file.
XIN-5052	Xinet Database	Full Text Search Engine (MySQL): Collations errors resolved when upgrading to Xinet 18.
XIN-5050	Search Engine II	Advanced and Quick Search: Search for assets using special characters are now found correctly. For example, assets using ÖÅÆØ in their file names.
XIN-5046	Xinet Portal	Marquee Template: When the Administration view site option to display folders is set (PORTALADMIN site configuration settings in the Navigation section) the login page is now displaying correctly.
XIN-5025	Portal Marquee UI	Marquee Template: Metadata using commas as a decimal points are now saving correctly.
XIN-5020	Portal Marquee UI, Xinet Portal	Marquee Template: Annotations added to multipage previews are displaying the correct numbers. Numbers listed in the Annotations list, in the left column of the Details view, are now matching those displayed on the preview.
XIN-5010	Portal Marquee UI	Marquee Template: Mitigated segmentation faults when a Portal users browses to a directory containing a large number (100's) of sub-directories.
XIN-5002	Portal Marquee UI, Xinet Portal	Marquee Template: Portal users can now use QuickSearch to search for comments added to assets metadata in the Details view.
XIN-4998	Portal UI	When using the Basket 'Batch Keyword Apply' option on large number of assets (for example, over 100,000 assets saved to a Basket), the metadata is now applied to all assets in the Basket.
XIN-4997	Portal Marquee UI	Marquee Template: The 'Slate' theme now displays the correct background Gray color in the List view.
XIN-4936	PDFOPI	PDF image replacement print queues, using the default settings, are now printing all of the PDF pages correctly for multiple page PDF assets.
XIN-4697	Client Installer, Picture Wrangler	Client Plug-ins now support Adobe CC 2015.
XIN-4064	Xinet Database	Non-Ascii characters supported: Swedish characters are now supported as decomposed path names when using the import command to import metadata into the Xinet Database.
XIN-1940	Xinet Portal	Portal File Manager: When moving or coping assets to a newly created folder, using a file name containing a trailing space, the action is completed correctly.

XIN-1972XIN-1940	Xinet Server, Xinet Portal	XMP Export: When using the Basket in Portal and selecting Download Archive of Files with XMP Export enabled, the XMP sidecar file now exports the metadata fields from the database and the XMP packet correctly. Portal File Manager: When moving or coping assets to a newly created folder, using a file name containing a trailing space, the action is completed correctly.
XIN-2358XIN-1972XIN-1940	Xinet Database, Xinet Server, Xinet Portal	Quick Sync no longer spawns a <i>dtrebuild</i> process for each new file in a volume; preventing large numbers of processed being started. XMP Export: When using the Basket in Portal and selecting Download Archive of Files with XMP Export enabled, the XMP sidecar file now exports the metadata fields from the database and the XMP packet correctly. Portal File Manager: When moving or coping assets to a newly created folder, using a file name containing a trailing space, the action is completed correctly.

KNOWN ISSUES

The full list of known issues that are included in this release are detailed below.

Ticket	Component	Resolution
XIN-3001	Portal	Legacy migrated sites to Portal 4.6 do not show folders in the Portal main area unless the site is saved. This occurs when the site option Display folder in the main area is selected. Workaround: Open the Administration view and save the Portal Site settings in the Portal tab.
XIN-3061	Pilot UI	Saved search queries for Portal users, using the default search engine (not Solr Search), are not displaying the results from the saved path.
XIN-3103	Xinet Server, Portal	Portal passwords using the percent (%) character fails.
XIN-3206	Xinet Portal	MVIEW Zoom: Enlarge the whole canvas in MVIEW as the user zooms into an image.
XIN-3316	Portal PHP	Advanced Search not being saved when using multiple conditions with the Search Field 'File/Folder'.
XIN-3340	Xinet Portal	Batch Image Order: Images added to the Basket are not saving the following set options: XMP Export , Include non-image files , Leave vector images unconverted , and Include all pages .
XIN-3433	Portal	Quick Search not working for Portal version 4.5.1 or later after upgrading to Portal 4.6.1.
XIN-3885	Portal	Advanced searches are not being saved when setting multiple conditions using the File/Folder Search Field option.
XIN-3938	Portal, Xinet Server	Problems with assets using double quotes in the file names. The double quotes are converted to %22 and Portal users are not able to use the File Manager to rename or delete assets.
XIN-4075	Open File Support, SOLR Search	Open Office version 3 previews are not displaying for some Office documents. Workaround: Upgrade to Open Office version 4 to view previews. Note: With Solr Search enabled, the server must have Java VM version 1.7 installed.
XIN-4166	PC Connectivity Software	PC Connectivity software is not supported on Mac OS X 10.7 + for Xinet servers without AFP.

XIN-4431	Xinet Server, Xinet Core, Xinet Database	<p>In order to install on Red Hat 7.0 the backward compatible <i>libpng</i> library must be installed.</p> <p>The standard install will include:</p> <pre>/lib64/libpng15.so.*</pre> <p>But our code needs the older <i>libpng12.so.0</i>.</p> <p>If the library is not present, it can be installed by running the following command:</p> <pre>> yum install libpng12.x86_64</pre>
XIN-4477	Xinet Portal	Access Control List name (ACLs): Due to a limitation of the use of ACL's with Portal, in addition to designating specific server access, the address of the Portal address must be included for Change Password and Basket downloads to function properly for Portal users.
XIN-4513	Xinet Database	Data Fields: When changing the name of a metadata field, with the option "Save into XMP" enabled, a new metadata field is saved to the database along with the original metadata field.
XIN-4652	Xinet Portal	Add video playback scrubbing.
XIN-4679	Xinet Portal	Marquee Template: Warning required when illegally uploading a folder to Portal or Pilot. Currently the progress bar hangs.
XIN-4685	Xinet Portal	Marquee Template: Allow users to add text annotations.
XIN-4771	AppleShare	<p>AppleShare Performance Issues:</p> <p>Previews are slow to display on Mavericks and Yosemite client machines due to file sharing performance connection problems.</p> <p>Workaround:</p> <p>Option 1: Turn off previews in the Finder.</p> <p>Option 2: TRY setting the "Maximum size of the FPO (in Kilobytes)" in the preview settings to something smaller, like 4000 instead of the default 7168. If they're making EPS FPOs and don't need images in their "thin" output, you could turn on the "Omit images (include a gray Bounding Box only)" option.</p>
XIN-5023	Xinet Database	Marquee Template: Error messages are displaying when extracting general application icons from a users system.

INSTALLATION INSTRUCTIONS

All guides are available online. Log into www.northplains.com/xinet and open our **Downloads > Documentation** volume to download our latest documentation.
